

95 RM RANGE 93-96

BMR SILAGE

KEY STRENGTHS

- Excellent tonnage and NDFD.
- Strong agronomics and good stress tolerance.
- Excellent ear development and ear fill.
- Excellent earlier-maturing companion to F2F488.

CHARACTERISTICS CHART

MANAGEMENT GUIDELINES

- Highly recommended for silage use within its adapted maturity.
- A strong fertility program is essential to maximize forage yield and protect forage quality.
- Solid plant agronomics will support moderate to moderate-high plant densities. Avoid very aggressive plant densities.
- For optimum performance, maintain on heavier soils with good water-supplying capacity and fertility practices. Avoid very sandy soils without irrigation capabilities.
- Works well in continuous corn or corn/soybean rotation.
- Harder kernel texture will benefit from a kernel processor.
- When storing BMR hybrids in a pile or a bunker, recommended moisture levels for harvesting range from 66 percent to 70 percent moisture; for bags, 66 percent to 68 percent.

Ratings: Mycogen Seeds utilizes a 9=Excellent, 1=Poor rating scale. GDU ratings calculated from planting date. BMR hybrids have significantly higher levels of fiber digestibility than other silage, grain and dual purpose corn varieties. The Silage Quality ratings are based on, and are relative to, other BMR hybrids. These ratings should not be used to compare BMR hybrids to other types of corn hybrids. Actual ratings based on best current information available and may be affected by changing environmental conditions. *Mycogen Seeds warrants that the seed sold by it conforms to the descriptions on accompanying labels within tolerances established or permitted by law. This warranty excludes and is in lieu of all other warranties, express or implied, including any warranty of merchantability or fitness for a particular purpose, which are hereby disclaimed.*
