

Positioning For:

25R25*

Maximizing Local Performance

25R25 is a moderate statured high yielding awned variety with very good scab resistance. Performs well in Wisconsin environments. Has good winterhardiness, good harvest standability and slightly below average test weight.

Management Comments

- Slightly later than 25R34
- Good replacement option for 25R47
- For optimum yields, 1.4 million seeds/acre seeding rate is recommended

Key Environments

High yield environments Highly Suitable
 Low yield environments Suitable
 Wheat in corn stubble Suitable

Suitability

Intensive Management Highly Suitable
 Late Planting Suitable
 Low Population Manage Appropriately

IMPORTANT: Trait rating scores provide key information useful in selection and management of Pioneer® brand products in your area. Information and ratings are based on comparisons with other Pioneer brand products, not competitive products. Information and scores are assigned by DuPont Pioneer Research Managers. Scores are based on period-of-years testing through 2014 harvest and were the latest available at time of printing. Some scores may change after 2015 harvest. Scores represent an average of performance data across areas of adaptation, multiple growing conditions, and a wide range of both climate and soil types, and may not predict future results. All products within a hybrid family receive the same score unless observations indicate a significant difference. Individual product responses are variable and subject to a variety of environmental, disease and pest pressures. Please use this information as only one component of your product positioning decision. Refer to www.pioneer.com/products or contact a Pioneer sales professional for the latest and most complete listing of traits and scores for each Pioneer brand product and for product placement and management suggestions specific to your operation and local conditions.
